SOURCES: Social Security Administration, *Annual Statistical Supplement to the Social Security Bulletin*, Table 6.C3 for years before 2000; data for 2000–2001 are based on a 1 percent sample from the Annual Award and Termination Transaction file; data for 2002 are based on 100 percent data from the Annual Award and Termination Transaction file.

NOTES: Excludes closed period awards and expedited reinstatement cases.

Before 1995, diagnostic data for cases awarded at the appeals levels were estimated on the basis of the diagnosis of cases allowed at the initial disability determination level.

Effective 2001, the Social Security Administration initiated a special review of 130,000 Supplemental Security Income (SSI) recipients who are potentially eligible for Social Security disability benefits due to earnings while receiving SSI. Many of these claims awarded since 2001 were for individuals under age 35 who were diagnosed with a mental disorder.

n.a. = not available.

a. AIDS and HIV records are counted in Infectious and parasitic diseases. Before 1990, they were included in Other.

b. Mental retardation was not identified separately before 1995.

c. Beginning with 2002, several ill-defined impairment codes were reclassified and added to the Unknown group.

d. Data not shown to avoid disclosure of information for particular individuals.

CONTACT: Carolyn A. Harrison (410) 965-5522 or di.asr@ssa.gov for further information.
